Comments: _____

Total number of drops / hoses: _____

Distance between hose drops: _____

Diameter of hose: _____

*(Car wash recommended 1-1/2" diameter for lengths under 40',
Auto Body = 1-1/4" diameter for air powered sanders)*

Length of hoses: _____

(Recommended 15'; we can make any length desired)

Distance from vacuum to first drop: _____

(EXTREMELY IMPORTANT: this determines horsepower)

Avg. number of drops / hoses in use at same time: _____

Is piping overhead or underground: _____

Type of piping: _____

(Recommend plastic for car wash, steel for flammable debris)

What voltage do you want for the system: _____

Do you need "Explosion-Proof" motors & components? _____

(Usually required near gas fueling areas & areas of high flammability)

Can all electrical be housed inside the building - OR -
do you need electrical enclosures for outdoor application: _____

Will you require a quote to have system installed? _____

If car wash, who is the tunnel manufacturer: _____

Please send a drawing of hose drop locations and the locations of the vacuum system. This will help us lay out the piping for size, length & number of fittings. Without a drawing we will quote our standard piping kits, which may not contain all the necessary fittings. **Fax to 402-333-5546**
